EVENT NAME :
INTRUDEX45

EVENT DESCRIPTION:

INTRUDEX45 – Rapid model development Challenge is a 40-minute technical competition designed to test participants' strategic thinking and rapid machine learning implementation skills.
The event consists of two rounds:
Dataset Auction
Rapid Model Development
Participants will strategically bid for a dataset and then build a machine learning model within a strict time constraint using the dataset they acquire.

TEAM DETAILS:

Team Size: 4 Members
Eligibility: Open to students from all departments.
Required Skills:
Basic knowledge of Python
Understanding of Machine Learning concepts
Familiarity with libraries such as Pandas and Scikit-learn

EVENT DURATION:

Round	**Activity**	**Duration**
Round-1	Dataset Auction	10 Minutes
Round-2	Model Building & Training	25 Minutes
Final Round	Submission & Evaluation	5 Minutes

EVENT STRUCTURE:

Round 1 – Dataset Auction (10 Minutes)

Each team will receive 1000 virtual credits.
4–5 datasets will be displayed on the screen with the following details:
Domain
Problem Type (Classification / Regression)
Number of Features
Dataset Size
Sample Data Preview
Teams will strategically bid using their credits.
The highest bidder wins the dataset.
Each team can acquire only one dataset.

Round 2 – Rapid Model Challenge (25 Minutes)

Using the dataset obtained in Round 1, participants must:
Perform data preprocessing
Select an appropriate machine learning model
Train the model
Generate performance metrics
Note:
Pre-trained models are not allowed.
External datasets are strictly prohibited.

RULES AND REGULATIONS (Include Evaluation Criteria):

Evaluation Criteria (100 Marks)

1. Auction Strategy – 20 Marks

Dataset selection strategy
Budget utilization
Logical justification for bidding

2. Model Performance – 60 Marks

Data preprocessing
Model selection
Performance score
Code structure and implementation

3. Explanation & Justification – 20 Marks

Clarity of approach
Model reasoning
Interpretation of results

6. Judging Metrics

For Classification Problems
Accuracy
F1 Score
For Regression Problems
RMSE (Root Mean Square Error)
R^2 Score

7. Rules and Regulations

Internet usage is not permitted (subject to lab policy).
Pre-trained models are strictly prohibited.
External datasets are not allowed.
Participants must submit their code file at the end of the event.
The decision of the judges will be final.

INFRASTRUCTURE REQUIREMENTS

1. Projector for displaying dataset auction
2. Pre-prepared datasets in CSV format
3. Computer lab systems or participant laptops
4. Evaluation system setup
5. Minimum two judges
